Microsemi makes no warranty, representation, or guarantee regarding the information contained herein or the suitability of its products and services for any particular purpose, nor does Microsemi assume any liability whatsoever arising out of the application or use of any product or circuit. The products sold hereunder and any other products sold by Microsemi have been subject to limited testing and should not be used in conjunction with mission-critical equipment or applications. Any performance specifications are believed to be reliable but are not verified, and Buyer must conduct and complete all performance and other testing of the products, alone and together with, or installed in, any end-products. Buyer shall not rely on any data and performance specifications or parameters provided by Microsemi. It is the Buyer's responsibility to independently determine suitability of any products and to test and verify the same. The information provided by Microsemi hereunder is provided "as is, where is" and with all faults, and the entire risk associated with such information is entirely with the Buyer. Microsemi does not grant, explicitly or implicitly, to any party any patent rights, licenses, or any other IP rights, whether with regard to such information itself or anything described by such information. Information provided in this document is proprietary to Microsemi, and Microsemi reserves the right to make any changes to the information in this document or to any products and services at any time without notice.

### About Microsemi

Microsemi, a wholly owned subsidiary of Microchip Technology Inc. (Nasdaq: MCHP), offers a comprehensive portfolio of semiconductor and system solutions for aerospace & defense, communications, data center and industrial markets. Products include high-performance and radiation-hardened analog mixed-signal integrated circuits, FPGAs, SoCs and ASICs; power management products; timing and synchronization devices and precise time solutions, setting the world's standard for time; voice processing devices; RF solutions; discrete components; enterprise storage and communication solutions, security technologies and scalable anti-tamper products; Ethernet solutions; Power-over-Ethernet ICs and midspans; as well as custom design capabilities and services. Learn more at [www.microsemi.com](http://www.microsemi.com).

# 1 Revision History

---

The revision history describes the changes that were implemented in the document. The changes are listed by revision, starting with the most current publication.

## 1.1 Revision 12.0

Updated changes related to CoreEDAC v2.11.

## 1.2 Revision 11.0

Updated changes related to CoreEDAC v2.10.

## 1.3 Revision 10.0

Updated changes related to CoreEDAC v2.9.

## 1.4 Revision 9.0

Updated changes related to CoreEDAC v2.8.

## 1.5 Revision 8.0

Updated changes related to CoreEDAC v2.7.

## 1.6 Revision 7.0

Updated changes related to CoreEDAC v2.6.

## 1.7 Revision 6.0

Updated changes related to CoreEDAC v2.5.

## 1.8 Revision 5.0

Updated changes related to CoreEDAC v2.4.

## 1.9 Revision 4.0

Updated changes related to CoreEDAC v2.3.

## 1.10 Revision 3.0

Updated changes related to CoreEDAC v2.2.

## 1.11 Revision 2.0

Updated changes related to CoreEDAC v2.1.

## 1.12 Revision 1.0

Revision 1.0 was the first publication of this document. Created for CoreEDAC v2.0.

## 2 CoreEDAC v2.11 Release Notes

---

This document accompanies the release of CoreEDAC v2.11. It describes the features and enhancements of CoreEDAC v2.11. It also contains the information on system requirements, supported families, implementations, known issues and workarounds, and resolved issues with the previous version.

### 2.1 Features

CoreEDAC has the following features:

- Parameterizable RTL generator.
- Modes of operation:
  - Error detection and correction (EDAC) with internal RAM. EDAC RAM generation with optional background scrubbing circuitry.
  - EDAC encoder and decoder generation. The mode can be used to apply EDAC encoder and decoder to external memories.
- Flexible user data size from 4 to 64 bits. This corresponds to a codeword size from 8 to 72 bits.
- User-defined pipeline options to enhance EDAC throughput.
- Parameterizable refresh (scrubbing) rate.
- Improved latency and area characteristics.
- Correctable and error flags.
- Option to suppress writeback during the scrubbing session.
- Optional triple EDAC redundancy.

### 2.2 Interfaces

No standard interface available.

### 2.3 Delivery Types

No license is required to use CoreEDAC. Complete RTL source code is provided for the core and testbench.

**Note:** CoreEDAC is compatible with both Libero integrated design environment (IDE) and Libero SoC. Unless specified otherwise, this document uses the common name Libero to identify Libero IDE and Libero SoC.

### 2.4 Supported Families

CoreEDAC supports the following families:

- PolarFire® SoC
- PolarFire®
- RTG4™
- SmartFusion®2
- IGLOO®2
- SmartFusion®
- IGLOO®
- IGLOO®e
- IGLOO® PLUS
- Fusion®
- ProASIC®3
- ProASIC®3E
- ProASIC®3L
- Axcelerator®
- RTAX-S
- RTAX-D
- ProASIC®PLUS

## 2.5 Supported Tool Flows

- CoreEDAC v2.11 requires the Libero software v9.1 or later.
- Supports Windows® and Linux operating systems.

## 2.6 Installation Instructions

The CoreEDAC CPZ file must be installed into Libero software. This is done automatically through the Catalog update function in Libero, or the CPZ file can be manually added using the **Add Core** catalog feature. Once the CPZ file is installed in Libero, the core can be configured, generated, and instantiated within SmartDesign for inclusion in the Libero project.

Refer to the [Libero SoC Online Help](#) for further instructions on core installation, licensing, and general use.

## 2.7 Documentation

This release contains a copy of the *CoreEDAC Handbook*. The handbook, describes the core functionality and gives step-by-step instructions on how to simulate, synthesize, and place-and-route this core, and also implementation suggestions. Refer to the [Libero SoC Online Help](#) for instructions on obtaining IP documentation.

For updates and additional information about the software, devices, and hardware, visit the Intellectual Property pages on the Microsemi SoC Products Group website: visit:

<http://www.microsemi.com/products/fpga-soc/design-resources/ip-cores>.

## 2.8 Supported Test Environments

The following test environments are supported:

- Verilog user testbench
- VHDL user testbench

## 2.9 Resolved History

Table 1 lists the release history for CoreEDAC.

**Table 1 • Release History**

Version	Date	Changes
2.11	June 2020	Resolved SARs listed in <a href="#">Table 2</a> .
2.10	October 2017	Resolved SARs listed in <a href="#">Table 3</a> .
2.9	July 2017	Resolved SARs listed in <a href="#">Table 4</a> .
2.8	December 2015	Resolved SARs listed in <a href="#">Table 5</a> .
2.7	August 2015	Resolved SARs listed in <a href="#">Table 6</a> .
2.6	February 2015	Support for RTG4 family is added and reported issues are fixed.
2.5	November 2013	Resolved SARs listed in <a href="#">Table 8</a> .
2.4	August 2013	FPGA fabric register replaces a hard RAM macro read data pipeline on AX and RTAX-S/SL/DSP devices.
2.3	June 2013	Support for multiple EDAC instances.
2.2	March 2013	Resolved SARs listed in <a href="#">Table 11</a> .
2.1	February 2012	Maintenance, fix for VHDL synthesis error and reducing the number of synthesis warnings. Optional error injection test port added.
2.0	January 2009	First Production release.

## 2.10 Resolved Issues in the v2.11 Release

**Table 2 • Resolved SARs in CoreEDAC v2.11 Release**

SAR	Description
108266	System Verilog keyword used as signal name.
109408	CoreEDAC IP 2.10.104 fails to generate for PolarFire uSRAM.
110197	CoreEDAC v2.10.104 illegal address simulation warning.
110467	CoreEDAC memory configuration limitation.
111006	Enhancement: Updated CoreEDAC Handbook.
107638	CoreEDAC 2.10.104: Synthesis fails for RTG4.

## 2.11 Resolved Issues in the v2.10 Release

**Table 3 • Resolved SARs in CoreEDAC v2.10 Release**

SAR	Description
92242	Provide PolarFire support.

## 2.12 Resolved Issues in the v2.9 Release

**Table 4 • Resolved SARs in CoreEDAC v2.9 Release**

SAR	Description
83017	Handbook update related to timing diagram with NGRST and RST, related to RAM simulation and update on START_SCRUB, STOP_SCRUB and RST_TIMER ports and '?' is observed in CoreEDAC hierarchy.
89984	Handbook corrections related to ERROR/CORRECTABLE flags.

## 2.13 Resolved Issues in the v2.8 Release

**Table 5 • Resolved SARs in CoreEDAC v2.8 Release**

SAR	Description
69637	Add IGLOO2 family to a packager list.
74020	Eliminate difference between pre- and post-synthesis simulation results.

## 2.14 Resolved Issues in the v2.7 Release

**Table 6 • Resolved SARs in CoreEDAC v2.7 Release**

SAR	Description
64039	Minor HB correction.
68390	Add RTG4 Utilization and performance numbers to the Handbook.
68546	Fix VHDL code causing simulation failure when AX or RTAX families are selected.

## 2.15 Resolved Issues in the v2.6 Release

**Table 7 • Resolved SARs in CoreEDAC v2.6 Release**

SAR	Description
11878	Limit the minimal scrubbing period by ten times the protected RAM depth.
45742	Eliminate RAM initialization on synchronous RST signal. The initialization should only start on asynchronous NGRST signal that signifies powering of an FPGA device.
55647	Fix VHDL initialization circuitry
61231	Reset TimerCnt upon scrubbing completion
61305	Provide flexible RAM generator DEVICE parameter value based on actual FPGA device selection.
62323	Provide RTG4 support.

## 2.16 Resolved Issues in the v2.5 Release

**Table 8 • Resolved SARs in CoreEDAC v2.5 Release**

SAR	Description
39138	Hide IP symbol unused ports on the SmartDesign canvas view when the core is configured for ECC Codec mode.
50680	Fixed incomplete scrubbing that can occur when a user interrupts the scrubbing.

## 2.17 Resolved Issues in the v2.4 Release

**Table 9 • Resolved SARs in CoreEDAC v2.4 Release**

SAR	Description
49523	The SAR was resolved in the v2.4 release of CoreEDAC. The SAR requested hard RAM read data pipeline to be bypassed on AX and RTAX-S/SL/DSP devices. Instead an FPGA fabric-based register is used when necessary.

## 2.18 Resolved Issues in the v2.3 Release

**Table 10 • Resolved SARs in CoreEDAC v2.3 Release**

SAR	Description
48154	Support for multiple core instances.

## 2.19 Resolved Issues in the v2.2 Release

**Table 11 • Resolved SARs in CoreEDAC v2.2 Release**

SAR	Description
22618	Scrubber must not overwrite fresh user data.
38358	Support for SmartFusion2 family.
39584	Add CODE_FROM_RAM port to be used with external memories.
40613	Better differentiation between flags raised during user access and scrubbing.
40804	Fix a design error preventing scrubber of processing the last RAM address.
43052	Suppress ERROR/CORRECTABLE flags until valid user read data appear at the output.

## 2.20 Resolved Issues in the v2.1 Release

**Table 12 • Resolved SARs in CoreEDAC v2.1 Release**

SAR	Description
20147	Reduce number of synthesis warnings and eliminate a fatal simulation error.
24067	Implement user access to the optional error injection test port.
22315	Eliminate VHDL synthesis error.
30469	Eliminate VHDL synthesis error.
31782	Eliminate VHDL synthesis error.
33092	Eliminate VHDL synthesis error.
32157	Remove a handbook inaccurate resource utilization note.

## 2.21 Discontinued Features and Devices

There are no discontinued features or devices.

## 2.22 Known Issues and Workarounds

USER\_REN\_TRPx ports are not available when SmartFusion2, IGLOO2, RTG4, or PolarFire micro-RAM is used (URAM = 1). In that configuration the micro-RAM read output is always enabled.
